REVISIONS
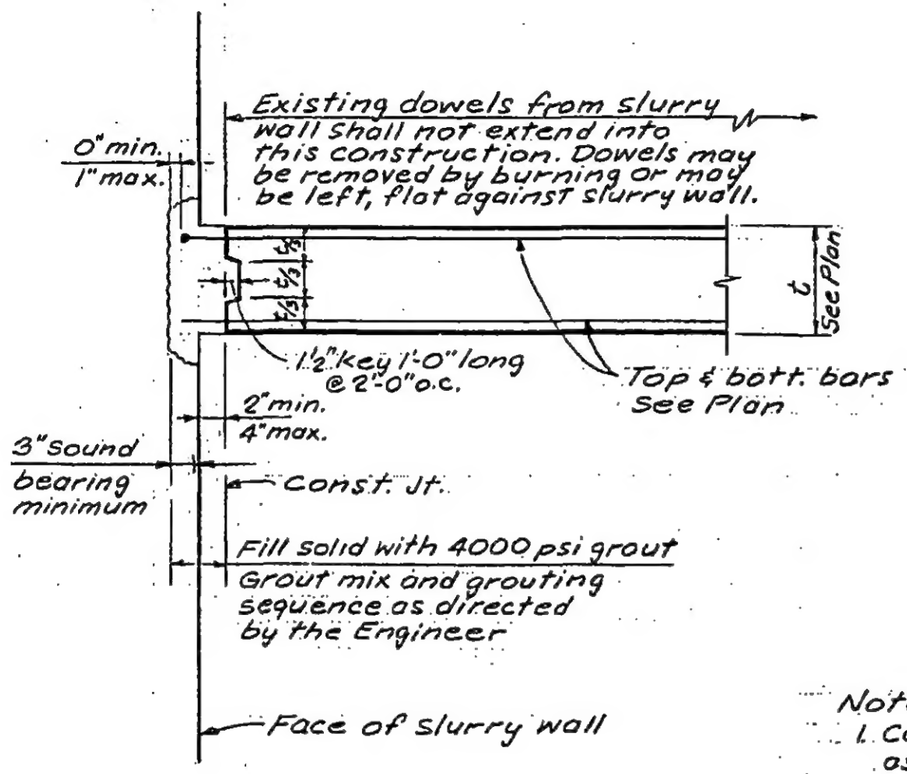
2-6-69
4-2-69
4-9-69



Notes:
1. Contractor shall deepen existing keys as required to obtain full bearing to the depth indicated in the drawings.
2. If required to obtain indicated bearing, keys shall be extended behind existing reinforcing steel within the slurry wall.
3. Contractor shall clean all loose or fractured material from within the key to expose sound concrete.
4. For slab at El. 253', see detail on 8-JK5-2.1

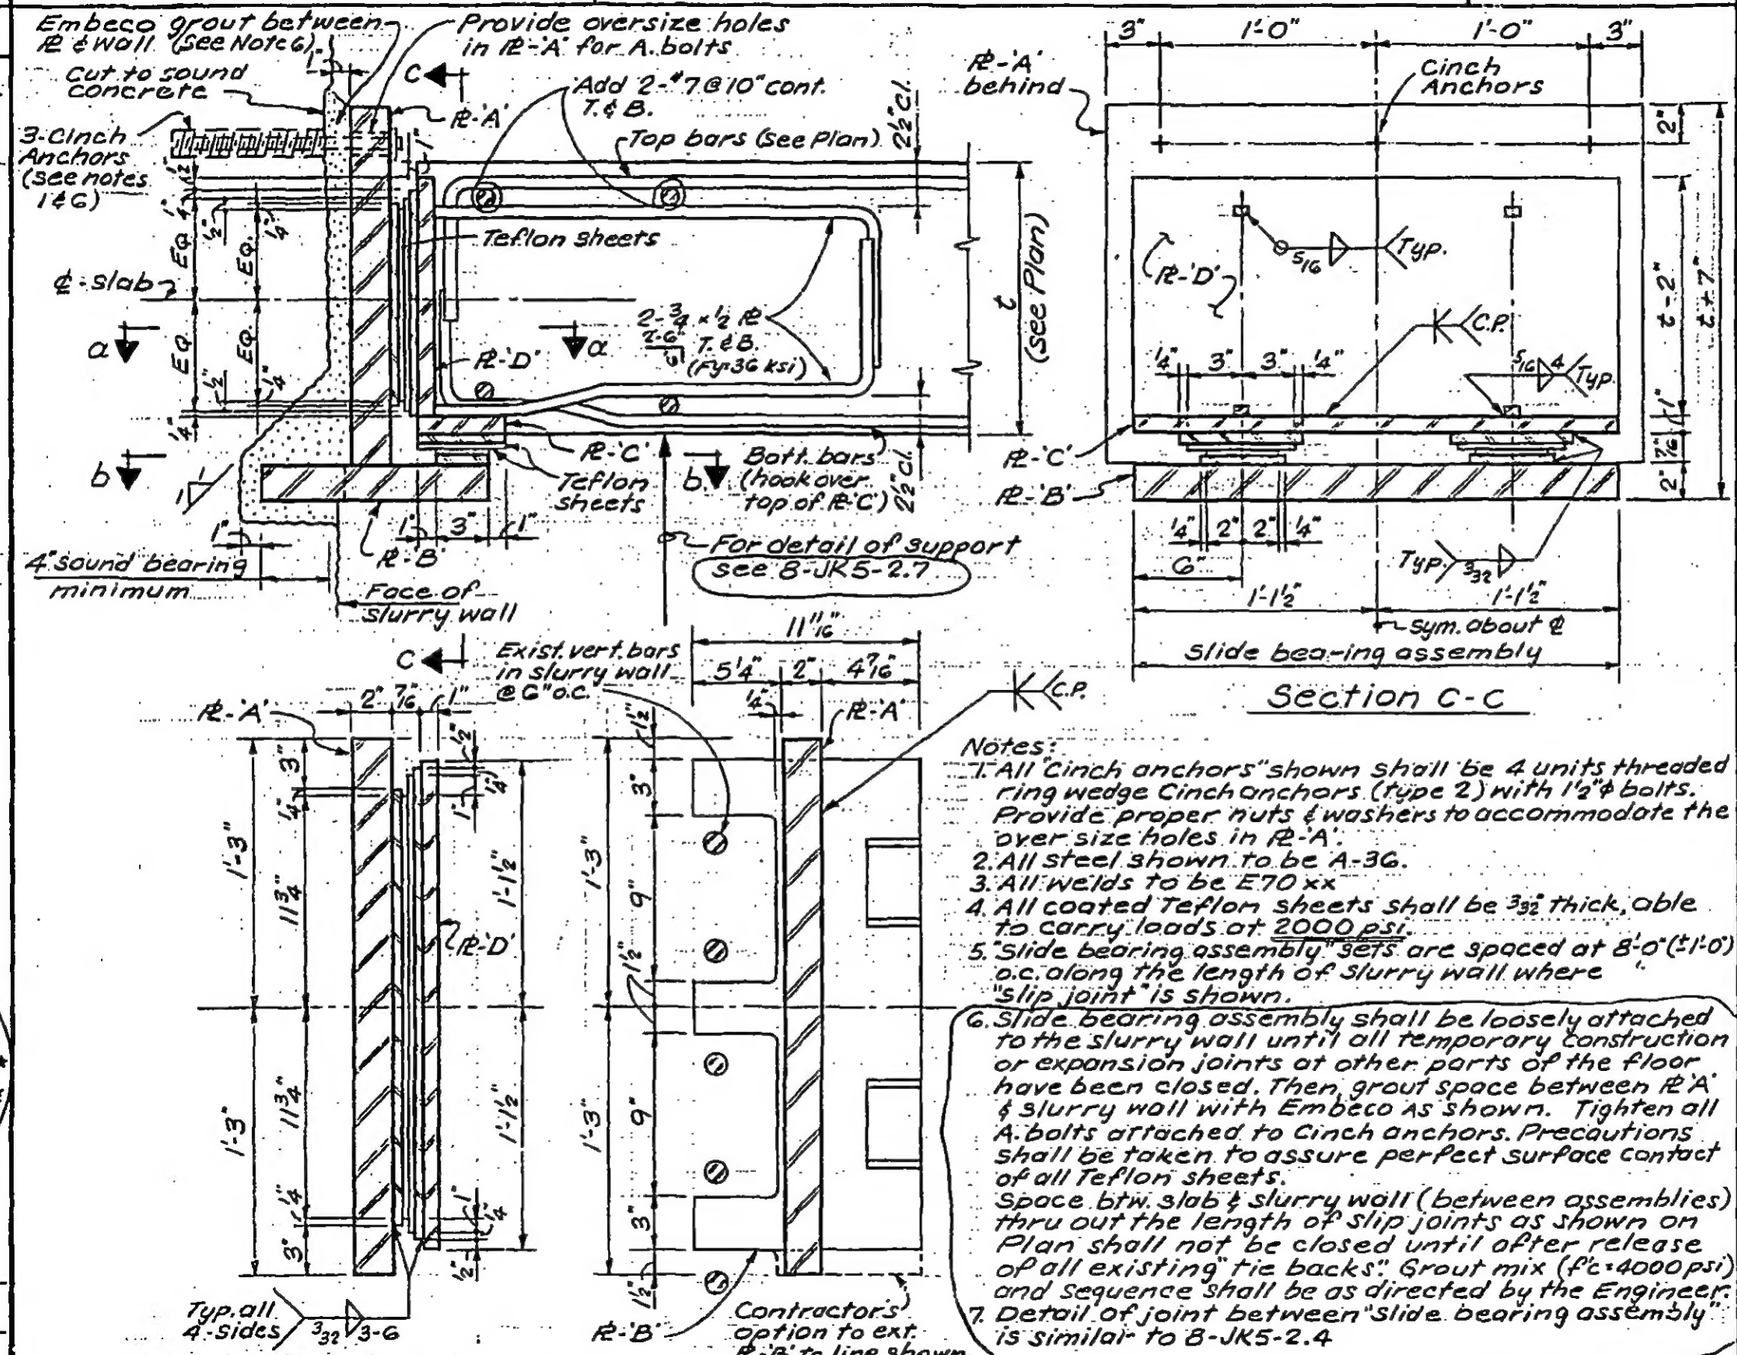
PROJECT: THE WORLD TRADE CENTER | TITLE: TYP. DET. OF "SLIP-JOINT" BTW. SLAB & SLURRY WALL-TYPE A | DATE: 4-29-69

REVISIONS

5-26-69



Notes:

1. All "Cinch anchors" shown shall be 4 units threaded ring wedge Cinch anchors (type 2) with 1½"ϕ bolts. Provide proper nuts & washers to accommodate the over size holes in R-'A'.
2. All steel shown to be A-36.
3. All welds to be E70 xx
4. All coated Teflon sheets shall be 3/32" thick, able to carry loads of 2000 psi.
5. "Slide bearing assembly" sets are spaced at 8'-0" (±1'-0") o.c. along the length of slurry wall where "slip joint" is shown.
6. Slide bearing assembly shall be loosely attached to the slurry wall until all temporary construction or expansion joints at other parts of the floor have been closed. Then, grout space between R 'A' & slurry wall with Embeco AS shown. Tighten all A. bolts attached to Cinch anchors. Precautions shall be taken to assure perfect surface contact of all Teflon sheets.
   Space btw. slab & slurry wall (between assemblies) thru out the length of slip joints as shown on Plan shall not be closed until after release of all existing "tie backs". Grout mix (f'c = 4000 psi) and sequence shall be as directed by the Engineer.
7. Detail of joint between "slide bearing assembly" is similar to 8-JK5-2.4

LICENSED PROFESSIONAL ENGINEER
LESLIE E. ROBERTSON
No. 34360
UNIVERSITY OF THE STATE OF NEW YORK

Notes:

1. For slab type, see JKS-5.1 & -5.2.
2. Main reinforcement is parallel to span of slab, as shown on dwg. in short direction of slab.
3. Main reinforcement may be longitudinal wires or short wires in any WWF roll or mat.
4. All wires shall be deformed and shall conform to ASTM A496-64
5. All WWF shall conform to ASTM A497-64

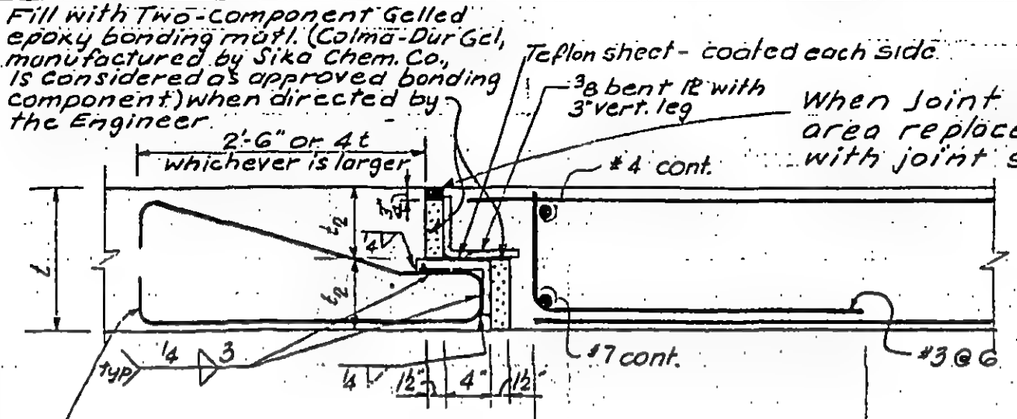
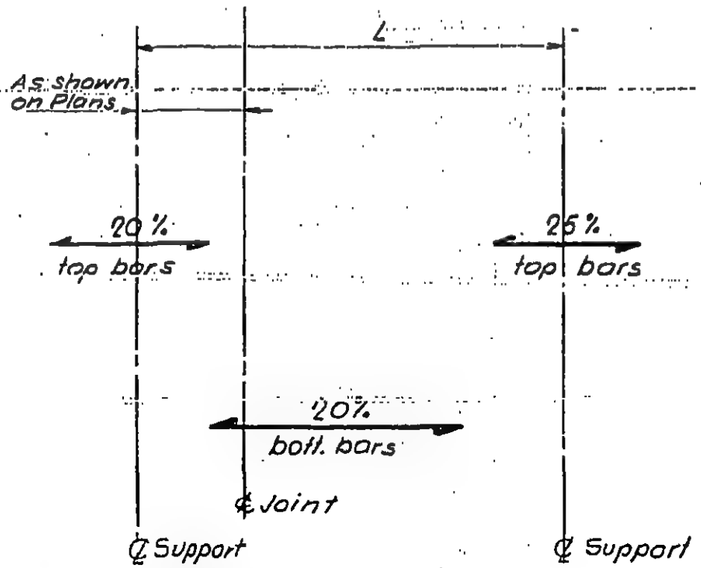
Fill with Two-component Gelled epoxy bonding matl. (Colma-Dur Gel, manufactured by Sika Chem. Co., is considered as approved bonding component) when directed by the Engineer.



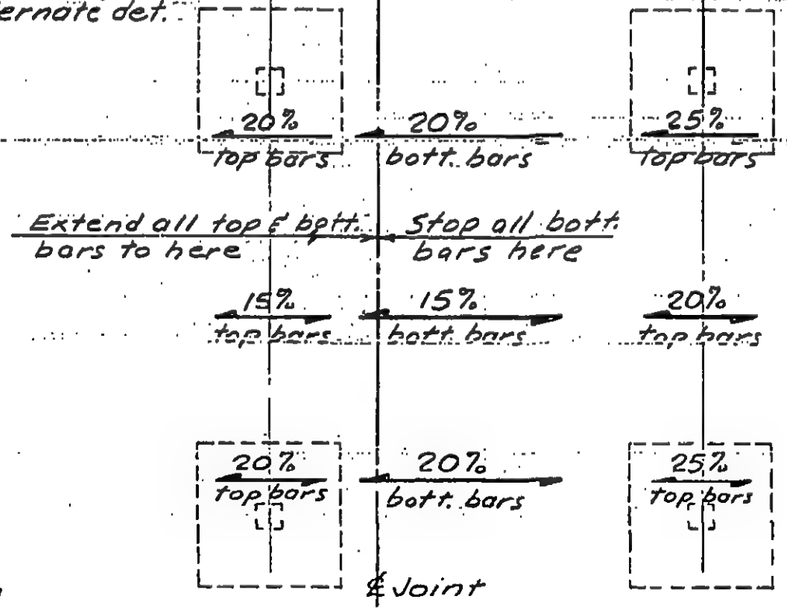
See Plans for Expansion Joint layout.
See 8-JK5-14.4 thru 14.6 for alternate det.

Notes:
1. Joints shall not be closed unless:
   a) All floors directly above are closed and the temperature control is properly maintained within the range as shown on the Mech. Dwg. SK-M-40 thru 45 (By JBB 8-23-68).
   b) As directed by the Engineer.



Note: Provide in all locations where directed by the engineer

TYPICAL ADDED REINFORCING AT ONE-WAY SLABS



Note: Provide in all locations where directed by the engineer

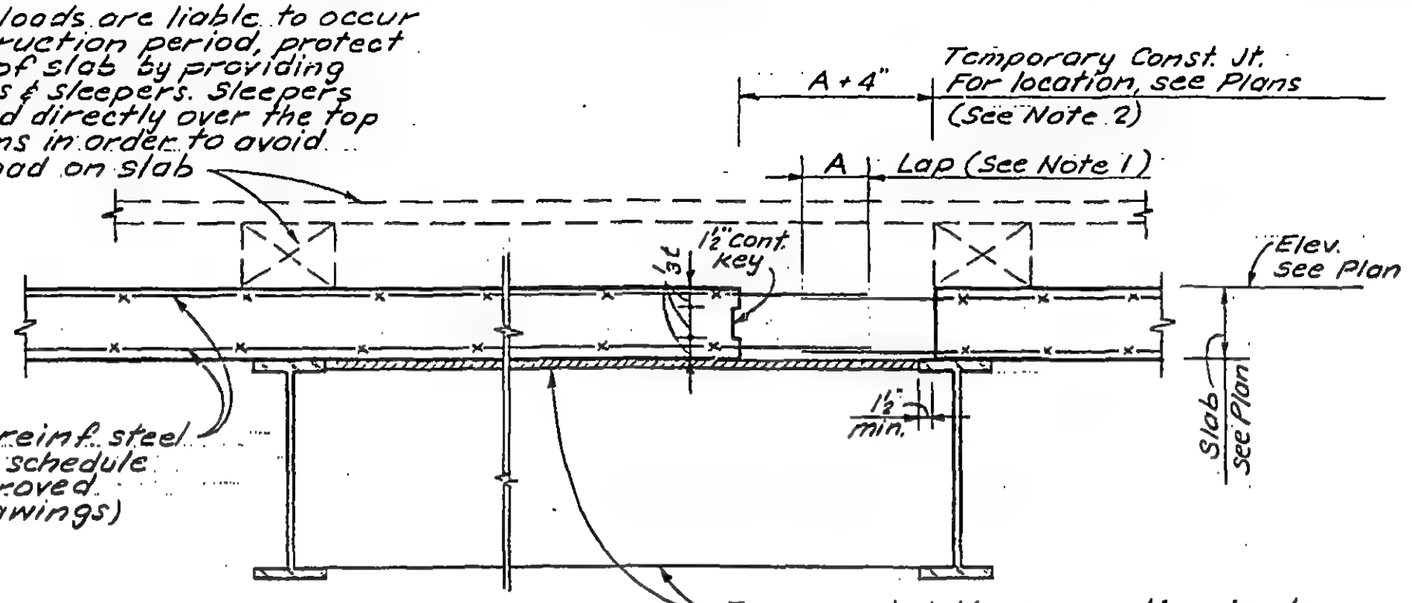
PROJECT: THE WORLD TRADE CENTER | TITLE: TEMPORARY CONSTRUCTION JOINT DETAIL | DATE: 2-27-69

REVISIONS

6-13-69 GEN. REV.

Where heavy loads are liable to occur during construction period, protect this portion of slab by providing timber planks & sleepers. Sleepers shall be placed directly over the top of steel beams in order to avoid accidental load on slab



Notes:

1. Provide lap splice for all reinf. to allow temperature movements and the lap shall be:
   a. For WWF, the overlap distance between outermost cross wires of each fabric sheet shall not be less than the spacing of the cross wires plus 2".
   b. For reinf. bars, the lap shall not be less than 36 bar diameters.
2. All joints shall not be closed unless:
   a. All floors directly above have been constructed, enclosure walls built, and the temperature control is properly maintained within the range as shown on Mech. Dwg. SK-M-40 thru 45 (by JBB, 8-23-68)
   b. As directed by the Engineer.
